LineUp2Step

Test plan for the client and testers

What this is

A list of everything in LineUp2Step that is ready to test today. Each test says what to do, what should happen, and what counts as a bug. Work through them in order: later tests use the accounts and posts you make in earlier ones. Expect about 45 minutes for the whole list.

Where to test

- Open **line-stepper-five.vercel.app** in a web browser. It works on a computer and on a phone (Safari or Chrome).
- Please do the tests on a phone if you can, since most dancers will use it there.
- The iPhone and Android apps from the stores are not ready yet. The website is the same app.

Accounts you will need

Some tests need two people, for example asking to join a crew and approving it. Use two email addresses you can read. A simple trick: most email services treat **yourname+test1@gmail.com** and **yourname+test2@gmail.com** as your normal inbox, so both codes arrive in one place. Use one in your normal browser window and the other in a private (incognito) window.

- **Account A**: your main test account (normal browser window).
- **Account B**: a second test account (private window, or a second phone).

How to report a bug

For each problem, send:

- The test number and step where it happened.
- What you did, what you expected, and what happened instead.
- A screenshot or screen recording.
- Your device and browser, for example "iPhone 14, Safari" or "Windows laptop, Chrome".
- The time it happened (it helps us find it in our logs).

Already known: please don't report these

These are on the list to fix before launch:

- The date is typed as year-month-day (2026-12-05) and the time in 24-hour format (19:00). A calendar and clock picker with US formats is coming.
- The address field doesn't suggest addresses as you type.
- The ZIP field can flicker when you move out of it.
- A scroll bar shows on the right side of some screens on a computer.
- Legal pages show "Draft" and words in brackets like [company legal name]. The final wording is being reviewed.

Not ready to test yet

- **Paying for posts.** Posting is free for now; paying $0.99 per post is switched off until payments are set up.
- **Reminder notifications on your phone.** These need the store version of the app.
- **Emails about events.** The only email the app sends today is the sign-in code.

What a bug can look like

Anything that stops you, confuses you, or looks wrong counts. Common signs:

- A button does nothing, or a spinner keeps spinning for more than about 10 seconds.
- A message like "couldn't be saved", "couldn't be loaded" or "something went wrong".
- The screen goes blank or white, or the page has to be reloaded to work again.
- Something you saved is missing or wrong after you reload the page.
- Text is cut off, overlaps, or hides behind the menu at the bottom.
- You can see or do something that should be private, like editing someone else's event.

Test 1. Sign up and sign in

You need: Account A's email address.

Steps

1. Go to **line-stepper-five.vercel.app** and tap **Profile** at the bottom (or top on a computer).
2. Read the line under the email box: it should mention the Terms of Service and Privacy Policy.
3. Enter Account A's email and tap **Send code**.
4. Open the email from LineUp2Step and copy the 6-digit code.
5. Type the code into the app and tap **Verify code**.

What should happen

- An email with a 6-digit code arrives within a minute or two.
- After entering the code, you are signed in and see your profile.
- If you reload the page, you stay signed in.

It's a bug if

- No email arrives after 5 minutes (check spam first).
- The email has a link instead of a code, or the link opens a different website.
- A correct code is rejected, or you get signed out when you reload.

Result: [ ] Works [ ] Bug found Notes: _____

Test 2. Fill in your profile

You need: Account A, signed in.

Steps

1. On **Profile**, fill in a display name, a handle (lowercase letters, numbers and _ only), a role, a short bio, a home area and a ZIP code.
2. Tap **Save profile**.
3. Reload the page and go back to **Profile**.

What should happen

- A confirmation appears after saving.
- After reloading, everything you typed is still there.

It's a bug if

- Saving shows an error, or the fields are empty after reloading.
- A valid handle or ZIP is refused, or an invalid ZIP (like 1234 or 99999) is accepted without a warning.

Result: [ ] Works [ ] Bug found Notes: _____

Test 3. Browse and search events

You need: Nothing. You can test signed in or out.

Steps

1. Tap **Events**.
2. Scroll the list. Tap **This week**, then **This month**, then **All upcoming**.
3. Type part of an event name, venue or city in the search box.
4. Tap an event to open it, then go back.

What should happen

- The list shows upcoming events with date, time, name, venue, city and price.
- The filters change the list to match: This week shows the next 7 days, This month the next 30.
- Search narrows the list as you type. Clearing it brings everything back.
- Events that already happened are not listed.

It's a bug if

- The list is empty or never finishes loading.
- A filter shows events outside its dates, or a past event appears.
- Search misses an event whose name you typed exactly.

Result: [ ] Works [ ] Bug found Notes: _____

Test 4. Find events near you

You need: A ZIP code in Virginia or North Carolina (for example 23510 Norfolk, 23220 Richmond, 28202 Charlotte).

Steps

1. On **Events**, tap **ZIP** and enter a ZIP code.
2. Try the distance buttons: **5 mi**, **25 mi**, **100 mi**.
3. Tap **Near me** and allow location when the browser asks.
4. Tap **Anywhere** to go back to all events.

What should happen

- Only events within the chosen distance show, each with how far away it is.
- A bigger distance shows the same or more events, never fewer.
- Near me finds your location (it may take a few seconds) and lists events around you.
- If you block location, a friendly message says so and ZIP still works.

It's a bug if

- Distances are clearly wrong (a Norfolk event shown as 300 miles from a Norfolk ZIP).
- Near me spins forever, or the app breaks after you block location.
- A real ZIP is reported as not recognized.

Result: [ ] Works [ ] Bug found Notes: _____

Test 5. Bookmark an event

You need: Account A, signed in.

Steps

1. Open any event and tap **Bookmark this event**.
2. Go to **Profile** and find **My bookmarked events**.
3. Open the event again and tap the button again to remove the bookmark.

What should happen

- The button changes to "Bookmarked" with a check mark.
- The event appears under My bookmarked events, and disappears after you remove the bookmark.

It's a bug if

- The button doesn't change, or the event doesn't appear (or doesn't go away) on Profile.

Result: [ ] Works [ ] Bug found Notes: _____

Test 6. Post an event

You need: Account A, signed in.

Steps

1. On **Events**, tap **+ Post an event**.
2. Fill in a title, description, date (like 2026-12-05), start time (like 19:00), venue, address, city, ZIP and price. Pick an area.
3. Under Visibility choose **Published**, then tap **Post event**.
4. Go back to **Events** and find your event in the list.
5. Sign out (or use Account B) and check the event is visible to others.

What should happen

- The event page opens right after posting, with everything you typed.
- The event appears in the Events list and in "near me" results for its ZIP.
- Posting is free for now; you are not asked to pay.

It's a bug if

- Posting fails, or details are wrong or missing on the event page.
- The date or time is shifted (for example 7 PM shows as midnight).
- The event doesn't appear in the list for other people.
- You can't reach the Post event button at the bottom of the form.

Result: [ ] Works [ ] Bug found Notes: _____

Test 7. Save a draft, and lose nothing if you leave

You need: Account A, signed in.

Steps

1. Tap **+ Post an event** and type a title only.
2. Without saving, tap **Events** at the bottom to leave the form.
3. Tap **+ Post an event** again.
4. Fill in the rest, choose **Draft (only you)** and tap **Save draft**.
5. Check Profile under **My events**. Then check the event is not visible to Account B.

What should happen

- When you come back, the form says "Picked up where you left off" with your title filled in. **Start over** clears it.
- The draft shows in your My events, but other people can't see it.

It's a bug if

- What you typed is gone when you come back.
- A draft is visible to other people.

Result: [ ] Works [ ] Bug found Notes: _____

Test 8. Edit and cancel your event

You need: Account A, with the event from Test 6.

Steps

1. Open your event and tap **Edit event**.
2. Change the title and the time, then tap **Save changes**.
3. Edit again, choose **Cancelled** and save.
4. Open someone else's event and check there is no Edit button.

What should happen

- Changes show straight away on the event page and in the list.
- A cancelled event is no longer listed for other people.
- You can only edit your own events.

It's a bug if

- Changes don't save, or saving creates a second copy of the event.
- You can edit an event you didn't post.

Result: [ ] Works [ ] Bug found Notes: _____

Test 9. Start a crew

You need: Account A, signed in.

Steps

1. Tap **Crews**, then **+ Start a crew**.
2. Enter a name, description, home area and (optionally) a merch link. Leave it open to join requests.
3. Tap **Create crew**.

What should happen

- The crew page opens. You are listed as a member (the owner).
- The crew appears in the Crews list for everyone.

It's a bug if

- Creating fails, or the crew doesn't appear in the list.
- A name that is already taken gives a confusing error instead of asking for another name.

Result: [ ] Works [ ] Bug found Notes: _____

Test 10. Join a crew and approve a member

You need: Account A (crew owner from Test 9) and Account B.

Steps

1. As **Account B**, open Account A's crew and tap **Request to join**.
2. As **Account A**, open the crew, find Account B in the members area and tap **Approve**.
3. As Account B, reload the crew page.
4. As Account B, tap **Leave crew**.

What should happen

- Account B sees "Request pending" until approved, then appears as a member.
- After leaving, Account B is no longer listed.

It's a bug if

- The request never reaches the owner, or Approve does nothing.
- Someone other than the owner can approve or remove members.

Result: [ ] Works [ ] Bug found Notes: _____

Test 11. Follow someone

You need: Account B, signed in.

Steps

1. Open an event posted by Account A and tap the host's name.
2. On their profile, tap **Follow**.
3. Reload, then tap again to unfollow.

What should happen

- The button changes to "Following" and the follower count goes up by one, then back down when you unfollow.

It's a bug if

- The count is wrong, or following doesn't stick after reloading.

Result: [ ] Works [ ] Bug found Notes: _____

Test 12. Report something

You need: Account B, signed in.

Steps

1. Open an event posted by Account A and tap **Report this event** near the bottom.
2. Pick a reason, add a short note, and tap **Send report**.
3. Try the same on a crew page (**Report this crew**) and a person's profile (**Report this person**).
4. Check that your own events and crews don't show a Report link.

What should happen

- After sending, the form is replaced by "Thanks. Our team will review this event."
- The report reaches the admins (see Test 15).

It's a bug if

- Sending shows "couldn't be sent", or nothing happens.
- You can report your own content.

Result: [ ] Works [ ] Bug found Notes: _____

Test 13. Block and unblock someone

You need: Account A and Account B.

Steps

1. As **Account B**, open Account A's profile (tap their name on one of their events).
2. Tap **Block** and confirm.
3. As Account B, look at Events and Crews.
4. As **Account A**, look at Events, Crews and Account B's crew or profile.
5. As Account B, go to **Profile**, find **Blocked people** and tap **Unblock**.

What should happen

- After blocking, Account B no longer sees Account A's events, crews or profile, and Account A no longer sees Account B's.
- Any follow between the two is removed.
- After unblocking, both can see each other again.

It's a bug if

- Either account can still see the other's events, crews or profile while blocked.
- Unblocking doesn't bring things back.

Result: [ ] Works [ ] Bug found Notes: _____

Test 14. Usage data switch

You need: Any account.

Steps

1. On **Profile**, find **Share usage data** and turn it off.
2. Reload the page.

What should happen

- The switch stays off after reloading.

It's a bug if

- The switch turns itself back on.

Result: [ ] Works [ ] Bug found Notes: _____

Test 15. Moderation (admins only)

You need: An admin account (ask the developer to make yours an admin), and the report from Test 12.

Steps

1. As the admin, go to **Profile** and tap **Moderation**.
2. Find the report from Test 12. Tap the event name to look at it, then go back.
3. Tap **Dismiss**.
4. Optional, with a throwaway account only: report one of its events, then use **Remove event** or **Ban...**.
5. As a non-admin account, check there is no Moderation button on Profile.

What should happen

- Open reports are listed oldest first, with the reason, note, who reported it and when.
- Dismiss removes the report from the list. Remove hides the event from everyone except its owner.
- Ban hides everything that account posted and stops it signing in.
- Only admins see the Moderation button.

It's a bug if

- A report is missing from the list, or an action shows an error.
- A removed event is still visible to other people.
- A non-admin can see or use Moderation.
- Note: Ban is permanent for that email address. Only ban throwaway accounts when testing.

Result: [ ] Works [ ] Bug found Notes: _____

Test 16. Legal pages and notices

You need: Nothing. Works signed out.

Steps

1. On **Profile**, tap **Terms of Service**, then go back and tap **Privacy Policy**.
2. In a private window, open **line-stepper-five.vercel.app/legal/privacy** directly.
3. Open any event and any crew page and scroll to the bottom.

What should happen

- Both pages open, are easy to read on a phone, and show a "Draft" note for now.
- The privacy page opens without signing in.
- Event pages end with a short notice that events are listed by organizers; crew pages say crews are run by their members.

It's a bug if

- A link goes nowhere or opens a blank page.
- Text is cut off or overlaps on a phone.

Result: [ ] Works [ ] Bug found Notes: _____

Test 17. Delete an account (do this last)

You need: A throwaway account you don't need, for example Account B. This cannot be undone.

Steps

1. Sign in as the throwaway account. If you can, give it a crew first (Test 9).
2. On **Profile**, scroll down and tap **Delete account**, read the message, then tap **Delete my account**.
3. Check the account's events and crew from another account.
4. Sign up again with the same email.

What should happen

- You see "Your account was deleted" and are signed out.
- The account's events disappear. A crew it owned passes to its next member, or is deleted if nobody else was in it.
- Signing up again with the same email creates a brand-new, empty account.

It's a bug if

- Deletion shows an error, or the account can still sign in with all its old data.
- Its events or profile are still visible to others.

Result: [ ] Works [ ] Bug found Notes: _____

When you're done

Send the developer your notes and screenshots, including the tests that worked. "Everything in Test 4 worked on my iPhone" is useful too.
